Here is a short clip at the begging when we started to clear the tents. Several tents occupied identified by the hotspots (But majority unoccupied) and hundreds of rats moving around.

The clips sent out last night was at the end of ERT clearing he tents

Nice job all around: dealing with an active shooting, locating suspect, clearing for additional victims, addressing advocate concerns; and using the drone to maintain officer safety.

Not sure if the clearing had already occurred when the FLIR shot was taken, but....interesting how many tents appear unoccupied....and then there's the rodents....lots of heat signatures....

Well done!

Steve.

Good evening,

From 1813hrs to 2030hrs Cst. Callaghan deployed the Skyranger in support of ERT and Patrol units clearing Oppenheimer park after a reported shooting.

Cst. Callaghan flew at a height of app. 150ft and used the advanced Flir system to provide overwatch as ERT units moved throughout the park. I've attached two photo's, one with and one without the Flir activated. The advantage of the Flir system is dramatic. Cst. Perlstrom and Insp. Harris both assisted Cst. Callaghan with visual observations and radio updates.

Video footage of the flight was saved and will be held for MCS-RAAU.

Another great deployment.

Sgt. Wade Rodrigue, 1961
ERT Grey Squad
